

A colonoscopy could save your life

Join the FIND-CRC study to help improve early cancer detection

Colon cancer screening research

Colon cancer screening may sometimes be considered uncomfortable, or even embarrassing. But routine screening can help save lives and help people be here for those who need them the most!

About 60% of colon cancer deaths could be prevented if everyone aged 45 and older got screened regularly.

The **FIND Colon Cancer Screening Study** is looking for participants who have a physician-prescribed screening colonoscopy scheduled, and who are interested in advancing colon cancer research by completing an at-home or on-site blood draw.

Participants will earn compensation for their time and effort.*

We are looking for participants who:

Are 40 years of age and older

Are interested in participating in clinical research and advancing early detection testing

Have not had a colonoscopy in the past 9 years

Have questions? Contact your doctor.
